

# WASTE MANAGEMENT PLAN

Vessel Name:

The following policies have been implemented aboard this vessel:

1. **HUMAN WASTE:** The vessel is equipped with proper marine toilets and holding tank(s). Any Y-valves are set so that waste from the toilets is directed to the holding tanks when the vessel is (a) inside U.S. territorial waters or (b) in foreign waters where it is a "no discharge zone". The Y-valves when so set will be secured by means of a nylon non-removable wire tie or other similar seal.
2. **TRASH, GARBAGE, ETC.:** The vessel is equipped with waste receptacles in the galley and elsewhere. Upon boarding the vessel, the master or other hands will instruct all passengers as to the location of such receptacles, and instruct all personnel aboard that no trash or garbage is to be disposed of except in the receptacles. On extended cruises, receptacles will be emptied into appropriate bags or other containers kept aboard until the vessel puts in to an appropriate harbor where proper shore side receptacles can be used for disposal of trash and garbage. A "MARPOL" placard is posted in an appropriate place reinforcing these regulations.
3. **OIL, GREASE, ANTIFREEZE, AND OTHER CHEMICAL PRODUCTS:** None of these or similar products, used or new, shall be dumped overboard either directly or through bilge pumps or other means. All such products shall be disposed of into appropriate shore side receptacles. A placard is posted in the Engine room regarding this kind of "oil spill" and warns of the penalties for such spilling/dumping.
